

List of recent Master thesis

Title: Potential of retrofitted green infrastructure to reduce runoff in urbanized areas throughout a model implementation with site-specific constraints. 2020.

Title: HydroLang: Development of a web-based framework for environmental and hydrological analyses. 2020.

Title: Hydrological studies in Knockanelo ungauged catchment in Ireland followed by integrated 1D/2D flood modelling using Infoworks-ICM. 2020.

Title: Coastal morphological evolution near Authie Bay, France: Analysis and equilibrium modeling. 2020.

Title: Application of Water Quality Index methods in the context of aquaculture in marine environment. 2020.

Title: Assessing the value of integrating distributed hydrology components in D-Flow FM for simulating the effect of flooding. 2020.

Title: Flood risk analysis and generation of flood hazard maps: Case study – Bañado Norte and Bañado Sur areas in the city of Asuncion (Paraguay). 2020

Title: Dual drainage studies of the urban floods: Assessment of discharge coefficients of grate inlets. 2020

Title: Augmented Reality Mobile Application for Floodmap Data Visualisation. 2020

Title: Processes governing the water quality of the South Aegean Sea: a modelling approach. 2020

Title: Hydrodynamic Modelling of Yí River: Flood hazard estimation of Durazno City - Uruguay using Delft3D FM. 2020

Title: Modelling of The Groundwater - Surface Water Interaction Applying Analytical Hyporheic Flux Model. 2020

Title: Flood Analysis and Simulation Attempts of the Newly Proposed Capital City of Indonesia. 2020.

Title: Modelling highly dynamic high-temperature aquifer thermal energy storage system. 2020.

Title: Simulating cropping strategies to hydrological stresses – Bangladesh Meta Model. 2020.

Title: Towards global hydrological forecasting data services: Set-up of the production system of Deltares' Global Flood Forecasting and Information. 2020.
